The new reverse LCD cluster with RTMi enables the user to control the mileage according to riding conditions

TVS Radeon

TVS Motor, with its new Radeon motorcycle, has become the first two-wheeler manufacturer to launch a reverse LCD cluster & real-time mileage indicator (RTMi) equipped 110 cc bike in India.

TVS claims that this reverse LCD cluster with RTMi enables the user to control the mileage according to riding conditions. Clock, service indicator, low battery indicator, top speed & average speed, are some of the other features equipped in the new reverse LCD cluster.

TVS IntelliGO technology switches off the engine during long idling like traffic signals and other transient stops, said the company via a press release. It read, "The vehicle is ready to go by a simple throttle rev which enhances convenience. The technology also helps avoid fuel wastage during these stops."

Powered by Ecothrust Fuel injection (ET-Fi) technology, TVS Radeon as the manufacturer pointed out, delivers 15% better mileage and enhanced engine performance. Featuring the longest seat in its category, TVS Radeon also comes equipped with a USB charger.

BSVI DIGI Drum Dual Tone variant.
