New TVS Radeon – What's New

The most important addition the new Radeon comes equipped with is a multi-colour reverse LCD instrument cluster which is a first-in-segment feature.

Alongside displaying the basic information, this new LCD display also shows Real-time Mileage Indicator (RTMi). It also displays a Clock, Service indicator, Low battery indicator, Top speed Average speed data, etc.

Additionally, TVS have also equipped the new Radeon with their Intelligo technology – which aids in fuel saving for the rider. This feature switches off the engine after it's left idling for a few seconds and it can be started again by a slight twist of the throttle.

The new Radeon remains untouched in all other aspects and retains much of its characteristics from the previous versions.

It is powered by TVS's tried-and-tested 109.7 cc, air-cooled engine that produces 8.08 HP and 8.7 Nm of torque. The engine is assisted by a 4-speed transmission system.

Based on a single cradle frame, the new Radeon rides on 18" alloy wheels at both ends that are suspended by telescopic forks at the front and dual springs-shocks at the rear.

The Braking setup comprises a drum at both ends for the drum-variant while the disc-variant gets disc brake hardware only in the front wheel. The new Radeon comes equipped with a 10 L fuel capacity.
